

Global Aluminum Company selects Zycus' Automated Spend Data Software to power Global Spend Analysis

December 12th, 2005 : Princeton, NJ, US- One of the leading aluminum companies in the world has selected Zycus Spend Data Management software to set up a repeatable spend analysis infrastructure. Zycus continues to extend its lead in powering automated spend analysis for global organizations. The leading aluminum company is setting up a global spend analysis infrastructure for getting unified visibility into their spending across multiple continents.

The reasons for having an automated global spend analysis infrastructure are core to every purchasing organization. Automation delivers actionable spend analysis within hours of reporting period closure as opposed to many weeks using manual processes. Global spend analysis is key to unlocking large savings opportunities as opposed to region specific spend analysis.

We have a history and reputation of leading the industry with our innovative solutions for automated spend analysis. At the global Aluminum Company, Zycus' Artificial Intelligence based AutoClass product will automatically process million of purchase transactions and deliver ready spend analysis within hours of the end of the reporting period. With manual service providers, global companies had to wait for weeks (even months) after the end of the reporting period to get actionable spend analysis.

Key to the selection has also been Zycus' ability to deliver an automated spend data management software for multiple operating regions and languages. A global spend analysis uncover savings through supply base leverage across geographies. At the global Aluminum Company, the Zycus software will be deployed to automatically handle data in multiple languages such as English, French, German, Portuguese.

About Zycus

Zycus is the leading provider of Spend Data Management (SDM) software suite - designed to solve the data quality problems that result in poor spend visibility, ineffective purchasing compliance, and low adoption of eProcurement. SDM product suite consists of a set of software tools which can plug in with existing IT infrastructure like ERP, Data Warehouse, eProcurement applications etc. to provide automated spend/master data classification & enrichment. Zycus Spend Data Management™ has helped leading enterprises around the globe build end-to-end solutions across their existing IT infrastructure for: Detailed Spend Visibility, Purchasing Compliance, Material Master Enrichment, and Catalog Search. Fortune 500 organizations such as ABB, ADP, General Electric, P&O and Unilever have already implemented and experienced the power of these solutions. For more information log on to www.zycus.com
